Compared to the versions in the IEEE Xplore and the EURASIP database, here I corrected the two mistakes on the text found after publication:

- Page 3, Section 3, eq. (8a): the index of $\hat{A}$ should be k, not t. Same in the sentence just before the equation. Additionally, the order of the samples of $\mathbf{u}(k)$ should be inverted,

  i. e. $\mathbf{u}_a(k) = \begin{bmatrix} \hat{A}(q, k-1)u(kR - M + 1) \\ \vdots \\ \hat{A}(q, k-1)u(kR) \end{bmatrix}$

- Page 4, Section 3, eqs. (15e): in the definition of $\mathbf{K}(k)$, the second term in the inverted matrix should be $M/R\mathbf{\Psi}_{ee}$, i.e. the factor M/R should be included.
