Yet Another Phonetic Alphabet (YAPA)

In the following basic phoneme set, each phoneme is represented with one symbol. Next to each YAPA-symbol, the IPA equivalent as well as an example are given.

Consonants								
Occlusives			Fricatives			Others		
YAPA	IPA	example	YAPA	IPA	example	YAPA	IPA	example
p	p	/p/et	f	f	/f/link	m	m	/m/es

a	a	/aa/n				A	ɑ	l/a/t

'Real diphthongs' as well as marginal phonemes occurring in loan words are represented with two symbols, the first of which is a vowel and the second of which is a diacritic: '~' for nasalisation, '^' for diphthongisation, and ':' for lengthening. For the sake of completeness, also the 'pseudo-diphthongs' are listed: they consist of two consecutive phonemes out of the basic set.

YAPA	IPA	example	type
E~	ɛ̃	vacc/in/	marginal phonemes
O~	ɔ̃	c/on/gé	id.
A~	ɑ̃	croiss/ant/	id.
Y~	ỹ	parf/um/	id.
E^	ɛĭ	/ij/s	real diphthongs
O^	ɔŭ	k/ou/s	id.
@^	œŭ	h/ui/s	id.
E:	ɛː	/ij/s, milit/ai/r	monophthongs or marginal phonemes
O:	ɔː	k/ou/s	monophthongs (or rare marginal sounds
@:	œː	h/ui/s	id.
uj	uj	r/oei/t	pseudo-diphthongs
oj	oj	n/ooi/t	id.
aj	aj	dr/aai/	id.
yw	yw	d/u/w	id.
iw	iw	n/ieuw/	id.
ew	ew	/eeuw/	id.

YAPA furthermore provide some sombols for non speech events.

YAPA	description
⋆	indiscernible speech (mumbling, ...)
%	speaker noises like laughing, coughing, ...
#	silence (e.g. pause between words)
