Exact and Approximate Modeling of Linear Systems: A Behavioral Approach

Ivan Markovsky, Jan C. Willems, Sabine Van Huffel, and Bart De Moor

Monograph 11 in the SIAM series "Mathematical Modeling and Computation".

Contents

Chapter 1 Introduction

Chapter 2 Approximate modeling via misfit minimization

PART I Static problems

Chapter 3 Weighted total least squares

Chapter 4 Structured total least squares

Chapter 5 Bilinear errors-in-variables model

Chapter 6 Ellipsoid fitting

PART II Dynamic problems

Chapter 7 Introduction to dynamical models

Chapter 8 Exact identification

Chapter 9 Balanced model identification

Chapter 10 Errors-in-variables smoothing and filtering

Chapter 11 Approximate system identification

Chapter 12 Conclusions

Appendix A Proofs

Appendix B Software

Software

- Software for structured total least squares estimation
- Software for approximate linear system identification
- Software for deterministic subspace identification
- A Matlab toolbox for weighted total least squares approximation
- A Matlab function for ellipsoid estimation
