PROJECT: **T1E1.4, Spectrum Management (DSM)**

ABSTRACT

The following italicized words are proposed for inclusion in the proposed text Section 1.2.1 Goals of the DSM Report in T1E1.4/2002-018R1.

Section 1.2.1 Goals
Two goals of dynamic spectrum management that should lead to better binder use and deployment guidelines are:

1) *DSL transmit signals should not transmit more power than needed to achieve their target rates and margins.*
2) *DSL transmit spectra should not occupy more bandwidth than is best used to achieve their target data rates and margins in a binder occupied by other DSLs.*

NOTICE

This contribution has been prepared to assist Accredited Standards Committee T1–Telecommunications. This document is offered to the Committee as a basis for discussion and is not a binding proposal on the authors or any of their companies. The requirements are subject to change in form and numerical value after more study. Telcordia Technologies specifically reserves the right to add to, amend, or withdraw the statements contained herein.
