PROJECT: **T1E1.4, Spectrum Management (DSM)**

ABSTRACT

The following italicized words are proposed for inclusion in the proposed text Section 1.2.1 Goals of the DSM Report in T1E1.4/2002-018R1. This text was agreed via a discussion on the DSM reflector, which was open to all interested parties.

Section 1.2.1 Goals

A goal of dynamic spectrum management that should lead to better binder use and deployment guidelines is:

DSL modems should not transmit more power than needed to achieve their target bit rates with specific protective margins and guaranteed quality of service.

NOTICE

This contribution has been prepared to assist Accredited Standards Committee T1–Telecommunications. This document is offered to the Committee as a basis for discussion and is not a binding proposal on the authors or any of their companies. The requirements are subject to change in form and numerical value after more study. The authors specifically reserves the right to add to, amend, or withdraw the statements contained herein.
